

Excel Task 6 – Formulas & Functions Fundamentals

README / Project Documentation

1. Project Overview

This project demonstrates essential Microsoft Excel formulas and functions for basic sales data analysis. The workbook contains transaction data, a product lookup table, and formula practice examples.

2. Objectives

- Understand and apply basic Excel formulas.
- Retrieve information using lookup functions.
- Apply logical conditions using IF.
- Calculate conditional totals using SUMIFS.
- Count records using COUNTIFS.
- Perform text manipulation using UPPER, LEFT, and text combining.

3. Dataset

The dataset includes Order ID, Date, Customer, Product ID, Product, Category, Region, Salesperson, Units, Unit Price, and Revenue.

4. Excel Functions Used

Function	Purpose
VLOOKUP	Retrieve product information from a lookup table.
XLOOKUP / VLOOKUP alternative	Perform lookup operations depending on Excel version.
IF	Classify revenue as High or Low.
SUMIFS	Calculate revenue based on a condition.
COUNTIFS	Count records matching a condition.
UPPER	Convert text to uppercase.
LEFT	Extract characters from the left side of text.
&	Combine text values.

5. Key Formulas

```
=VLOOKUP(Transactions!D2,Products!$A$2:$D$8,2,FALSE)
=VLOOKUP(Transactions!D3,Products!$A$2:$D$8,2,FALSE)
=IF(Transactions!K2>=50000,"High","Low")
=SUMIFS(Transactions!$K$2:$K$31,Transactions!$G$2:$G$31,"North")
=COUNTIFS(Transactions!$F$2:$F$31,"Electronics")
=UPPER(Transactions!C2)
=LEFT(Transactions!C2,3)
=Transactions!C2&" - "&Transactions!G2
```

6. Project Files

- Excel_Task_6_Formulas_Data.xlsx – Main Excel workbook containing the dataset and practice sheets.
- Excel_Task_6_README.pdf – Project documentation for GitHub.

7. Skills Demonstrated

Microsoft Excel • Data Analysis • Excel Formulas • VLOOKUP • IF • SUMIFS • COUNTIFS • Text Functions

8. Conclusion

This project strengthened my understanding of Excel formulas and functions and helped me practice basic data analysis using a structured sales dataset.
